EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Umbach on 12/21/2007.

The application has been amended as follows:

On lines 3 and 4 of claim 9, “, more preferably from 0.2 to 1.3 and even more preferably from 0.4 to 0.8” has been deleted.

On lines 2 and 3 of claim 10, “, preferably from 70 to 100°C” has been deleted.

On line 3 of claim 11, after “from”, ---the group consisting of--- has been inserted.

On lines 4 and 5 of claim 14, “, preferably from 1/1,000 to 1/150,000, more preferably from 1/5,000 to 1/50,000” has been deleted.

On lines 3 and 4 of claim 15, “, more preferably from 10 to 80% by weight” has been deleted.

On lines 2 and 3 of claim 16, “, preferably from 5°C to 60°C” has been deleted.

On line 3 of claim 17, “preferably” has been changed to ---or---.

On lines 4 and 5, “, preferably from 0.1 to 3 Mpa” has been deleted.

The following is an examiner's statement of reasons for allowance: the prior art of record does not disclose or render obvious a process, as called for in claims 1, for production of 1-

octene from butadiene by a step of bis-hydroisomerization of butadiene and a step of partial catalytic hydrogenation of produced 1,7-octadiene. Each of step is carried out in presence of specific catalysts as called for in the claim, namely step 1 is also carried out in the presence of an aprotic polar solvent which is selected from disubstituted cyclic ureas. The closest art of record - Pittman, Jr. et al. (4,243,829) - discloses a process of production of 1,7-octadiene from butadiene in the presence of a catalyst and in a solvent (see the abstract). However, Pittman, Jr. does not disclose using an urea solvent, namely disubstituted cyclic ureas, for the step of bis-hydrodimerization of butadiene (see the entire patent for details). Further, one having ordinary skill in the art who studies the specification, namely examples would recognize that applicants are the first to discover ureas used as the solvent for the process yield higher conversion of butadiene as well as higher selectivity of 1,7-octadiene (see tables).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
